WHEN TO ENGAGE US

- When software, infrastructure, and hardware need to work together as one solution.
- When internal teams need an external partner to scope, quote, and coordinate technical delivery.

CORE CAPABILITIES

Application Development & Integration

- Python, FastAPI, SQLAlchemy, and PostgreSQL-based backends
- Svelte and TypeScript administrative portals and line-of-business interfaces
- REST API design, systems integration, and workflow automation
- Authentication and identity integration including JWT, OIDC, SAML, MFA, and SSO
- SaaS-style platforms, survey systems, and multi-tenant management patterns

Infrastructure, Cloud & Productivity

- Switching, secure connectivity, and edge infrastructure deployment
- VLANs, link aggregation, STP variants, LLDP, and QoS configuration
- Small-site networking, firewall, and secure routing implementation
- Microsoft 365 onboarding, migration, and tenant configuration
- Azure AD and identity services integration for business applications

ENTERPRISE HARDWARE & SOLUTION DELIVERY

We support client, network, and infrastructure procurement through Canadian distribution channels and pair supply with practical implementation support. Engagements can include quoting, sourcing, staging, configuration, deployment coordination, documentation, and post-delivery support.

DELIVERY MODELS

- When public-sector or enterprise buyers need a responsive supplier with implementation capability.
- When prime contractors need a flexible delivery partner for scoped work or technical augmentation.

- Project-based technical delivery
- Subcontracting under prime contractors
- Scoped work packages and implementation support

- Hardware procurement and deployment coordination
- SaaS implementation and ongoing support
- Documentation, handover, and operational enablement
